

**“The Revolution
has Begun!”**

Proudly Made in America!

A Truly Unique Technology

"It's all in the helical magazine concept; because running out of ammunition is a malfunction!"

- More rounds per magazine means carrying fewer spare magazines.
- Enhances suppressive fire, increases confidence, and control when in a vulnerable position.
- Saves space and effort by not having to ship and store magazine and ammunition separately.
- Helps to control ammunition contamination, by eliminating the need to load in an unpredictable environment.
- Able to disengage clutch after charging and re-store the loaded magazine.
- Unloads instantly when a different type of ammunition is required, due to Calico's movable feed lip.

"Calico firearms are extremely accurate."

- Closed bolt firing position and fixed barrel.
- Shooting hand directly in line with bolt & barrel.
- Quick adjustable post for windage and elevation.
- Instant choice of ghost ring or combat sight picture.
- Adjustable front Kelly Grip (9mm carbine only).

"Calico firearms are very durable."

- Selection of highest impact and wear resistant materials.
- Each part is designed for strength, treated for optimal hardness and finished with the best corrosive protection available.
- Polymer parts are used for oil and chemical tolerance.
- Weapons are designed to function after submersion in up to 100 feet of sea water.
- Magazine is not forced into the bolt, preventing a malfunction, or subjecting the ammunition to mud, sand or other contaminants.

"You benefit when the weight of the ammunition is closer to your body!"

- Better balance and handling helps to minimize operator fatigue.
- Enables the operator to handle the weapon and effectively fire it with one hand.
- Ports strategically located on the magazine can instantly inform the operator of the approximate number of rounds available.
- Magazine changes may take place without changing the position of the weapon.

CALICO®

LIGHT WEAPON SYSTEMS

"A low profile provides a smaller target that's harder to hit!"

- Calico's helical feed system eliminates the obtrusive 'T' shape, so the operator can maneuver with greater ability and the magazine is less likely to collide with obstacles.
- Calico's design allows for a convenient place over the barrel to mount laser designator, lights, or reflex optical sights.

"Your partner shouldn't have to eat your brass!"

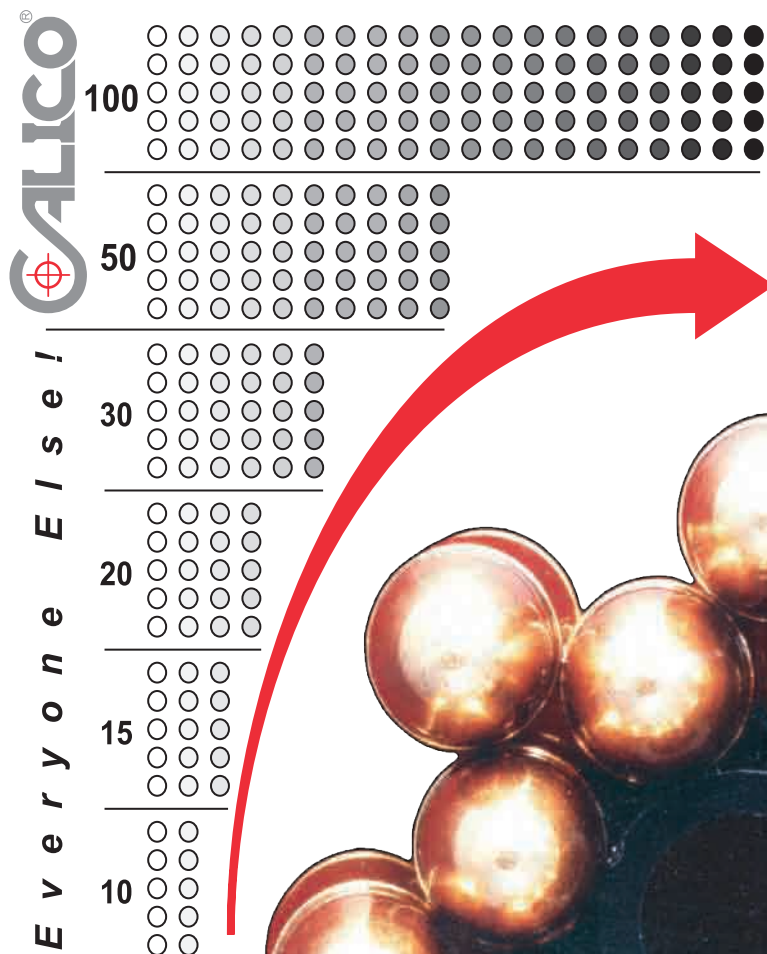

- Downward ejection allows us to make the firearm ambidextrous, allowing a greater number of users.
- The position of the ejection port ensures anyone or anything around you is not in the line of brass being ejected and allows for an optional brass catcher to be employed.

"Calico is your Best Choice!"

- Static bolt handle.
- Two position bolt stop, first position allows chamber inspection without the potential of chambering a round.
- Multiple position sliding butt-stock or instant transfer to multiple position solid butt-stock.
- Take down of all major assemblies without tools.
- Safety/selector designed for instant mode choice.
- Calico firearms feed hollow point, high velocity and subsonic ammunition.
- Sling swivels may be mounted on either side of the weapon in various positions.
- Low profile characteristics allow the shooter to assume a smaller target position and maneuver with greater agility.

- Ability to store the magazine loaded and change out the magazine without changing positions.
- The rate of fire allows the shooter to achieve double and triple hits consistently.
- The center of gravity of the weapon is closer to the shooter, enhancing handling characteristics and minimizing fatigue.
- Calico weapons are designed and produced in the United States by skilled craftspeople and protected by several mechanical patents.

The Experts Say it Best!

“... its light weight, good balance ... large magazine capacity, and downward ejection make the calico compare favorably to any personal defense weapon in the world”

Andrew C. Tillman - International Defense Review

“The effect of shooting the gun is to produce sort of a rolling thunder sound that goes on and on long after most guns run dry.”

Wiley Clapp - Gun World

“Calico is a great shoot”

Major Ron Orr (US Army - retired)
S.W.A.T. Magazine

“A real revolution in small arms ...”

Gregory Fetter
